

WHY CIGARETTE HAS A PATENT ON FLAVOR

13000000

Low tar 6 mg. PACT has great full flavor. And we get it a whole new way.

A way so new we have patented it.

We unlock flavor from the tobacco in the smoke stream, and we lock it up.

These elements are called aldehydes. They are the harsh gas that makes the smoke from real tobacco.

Now our new patented Purite filter can very selectively remove out much of the aldehyde gas.

When you smoke PACT in this form, the smoke stream has a new taste. It is like smoking the good part of real tobacco.

If you like purite flavor, smoke PACT has your answer.
