SUBJECT: KENT 80/KS TAR REDUCTION - FINLAND/907

Ref S/R 107/82

After evaluations and rejections of tar reduction samples 49B, 50B, and 51B we have reviewed deliveries and designs of several KENT products to find one which meets the 10.0 mg/cig. (DPM) and 0.7 mg/cig. nicotine constraints.

We propose the following two trials.

|                  | <u>Trial 1</u>                   | <u>Trial 2</u> |
|------------------|----------------------------------|----------------|
| •Blend (%):      |                                  |                |
| MGLF-31          | 69.9                             | 69.9           |
| Oriental         | 10.3                             | 10.3           |
| MRT              | 5.0                              | 0.0            |
| F.C. WTS         | 14.8                             | 19.8           |
| •Final Casing    | MGE-651                          | MGE-651        |
| •Final Flavor    | MGE-603                          | MGE-603        |
| •Cigarette Paper | --- Current KENT                 | ---            |
| •Density         | --- KENT GOLDEN LIGHTS (Less 2%) | ---            |
| •Filter Tow      | --- KENT GOLDEN LIGHTS           | ---            |
| •Plugwrap        | --- 9500 Coresta                 | ---            |
| •Tipping         | --- 1100 Coresta MMP*            | ---            |
| •Vent Target     | --- 42-44%                       | ---            |

\*We recommend the micromechanically perforated tipping because this is the only type of tipping with essentially invisible perforations at this high porosity level.
